

Zaid Alkallas

.NET Backend Developer

✉ eng.zaid.kallas@gmail.com ☎ +96395464355 📍 Damascus 🔗 LinkedIn 🐙 GitHub 📁 Portfolio

SUMMARY

Backend Developer with 2+ years of hands-on experience building robust, scalable Web APIs using ASP.NET Core (.NET 8/9/10) and C#. Proficient in modern architectural patterns including Vertical Slice Architecture and Clean Architecture, with strong expertise in EF Core query optimization, distributed caching (Redis), domain modeling, and automated testing. Combines solid engineering fundamentals with a track record of implementing production-ready practices like structured logging, health checks, and CI/CD pipelines.

EDUCATION

Bachelor's Degree in Informatics Engineering	2025 - 2029
Damascus University	
Diploma in Computer Technology	2023 - 2025
Technical Computer College (TCC) – Damascus University	
Grade: Excellent	
Graduated Second in Class	

SKILLS

Programming Languages	Backend Development (.NET)
C#, C++, Java	ASP.NET Core, ASP.NET Core MVC, Web API
Frontend Development	Databases & Data Access
HTML, CSS, Bootstrap, Blazor	SQL Server, PostgreSQL, EF Core, LINQ
Development Tools	Soft Skills
Git, GitHub, Docker, GitHub Actions	Effective Communication, Team Collaboration, Time Management, Critical Thinking, Research Skills

PROJECTS

BudgetFriend API - Personal Finance Management System

- Designed and developed an open-source personal finance Web API using **ASP.NET Core 10 Minimal APIs** and **Vertical Slice Architecture** to ensure feature isolation and maintainability.
- Optimized** Entity Framework Core **queries for high performance and clean data access patterns.**

- Modeled complex domain logic including multi-currency account management, transfers, transaction categorization, and financial dashboard aggregations.
- Integrated third-party cloud services and infrastructure including **Neon PostgreSQL**, **Render**, and **Resend** for automated transactional emails.
- Applied production-oriented practices: structured logging with **Serilog**, **JWT** authentication, request validation using **FluentValidation**, rate limiting, and health checks.
- Established robust integration tests using **xUnit** and **Testcontainers** running against real PostgreSQL containers, integrated into a **GitHub Actions CI** pipeline.

Technologies: C#, ASP.NET Core 10, EF Core, PostgreSQL (Neon), Redis, Docker, Serilog, xUnit, Testcontainers.

Source Code: [BudgetFriend.API](#)

AutoNest - Car Rental & Sales Platform

- Contributed to backend development and built management dashboards using Blazor and Radzen.
- Participated in system architecture planning, ERD design, database schema modeling, and workflow definition.
- Collaborated within a 4-member team developing ASP.NET Core Web APIs and React-based client interfaces.

Technologies: ASP.NET Core Web API, Blazor, React, Radzen, SQL Server

Click&Eat - Restaurant Management System

- Built a full-stack restaurant management platform using ASP.NET Core MVC and EF Core.
- Implemented role-based workflows for admins, managers, cashiers, chefs, customers, and guest users using ASP.NET Core Identity.
- Applied Repository Pattern, Unit of Work, and Service Layer architecture for business logic and data access.
- Automated unattended order handling using Hangfire background jobs and integrated email notifications.

Technologies: ASP.NET Core MVC, EF Core, SQL Server, Hangfire, ASP.NET Core Identity, Bootstrap
